

Is your pump choking?

This new Peerless concept lets you operate closer to BEP for less.

Peerless Pump Company has the solution...

...Simply swap your existing standard impeller for the new specially designed 8196 Low-Flow impeller.

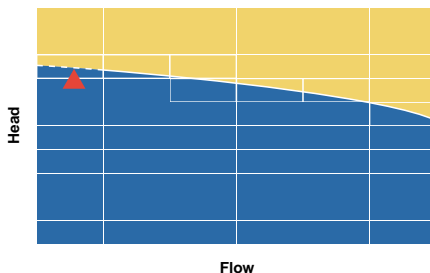

Did you know that if your pumps are not operating at their designed point then you may see the following problems:

- Premature seal failure
- Early bearing failure
- High energy usage
- Shaft failure
- Excessive down time

Are you operating your Goulds or Peerless pump choked back on the curve, with the resulting high maintenance costs?

Peerless has a solution for you that will save you money!

Call today and "Pump More for Less" with Peerless. Contact:

Solution:

- Simply swap your old standard impeller for the Peerless 8196 Low-Flow impeller.

Benefits:

- Needs no new casing.
- Specially designed for low-flow duties.
- Improved reliability and increased MTBF at these duties.
